Setup Instruction for Ubuntu

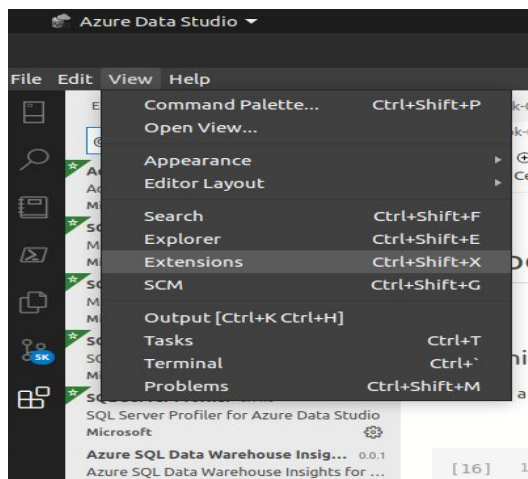

For windows setup refer book instruction([click here](#))

1.)Install SQL Server and create a database on Ubuntu([Click here](#)).

2.)Download and install Azure Data Studio([Click here](#)).

3.)Download [Northwind.sql](#)

4.)Open Azure data studio-->View-->Ext.

5.)Install Sql server,sql Admin and Sql Import Ext.

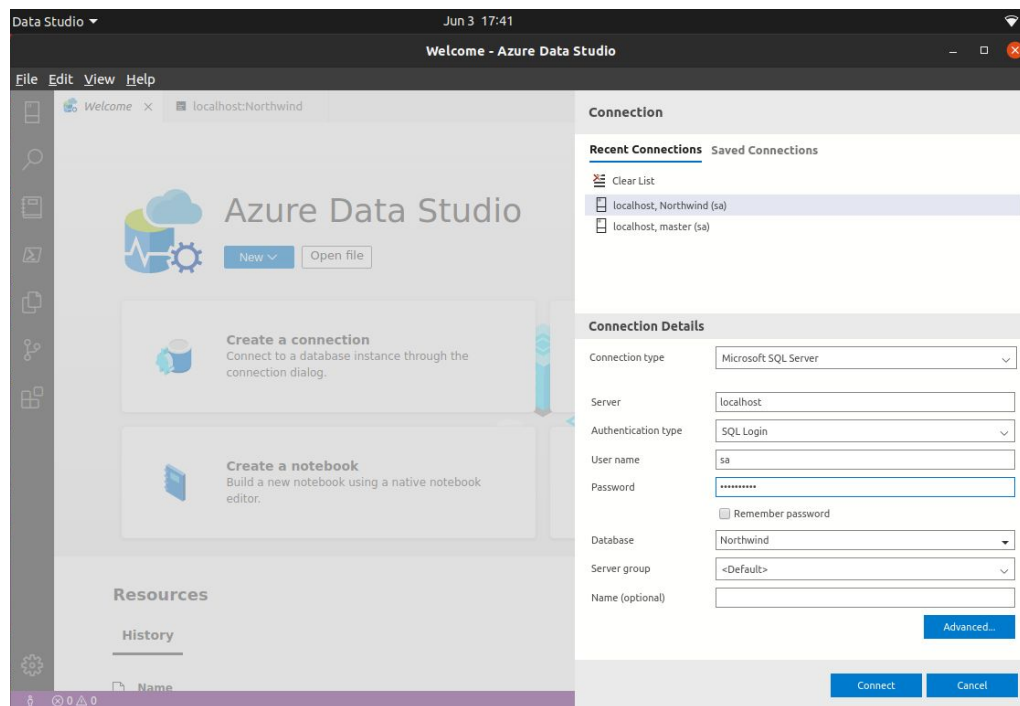

6.)Click on file-->New Notebook

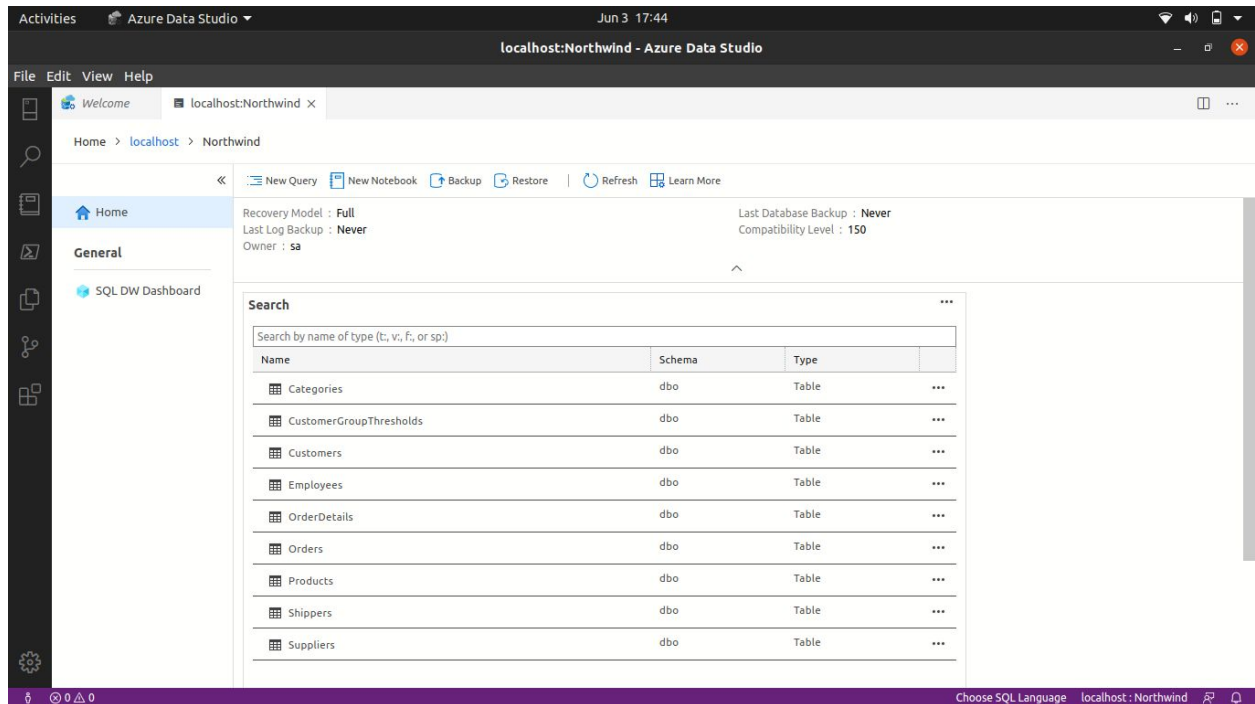

It will automatically download the jupyter notebook for you and install.

7.)Create database Northwind

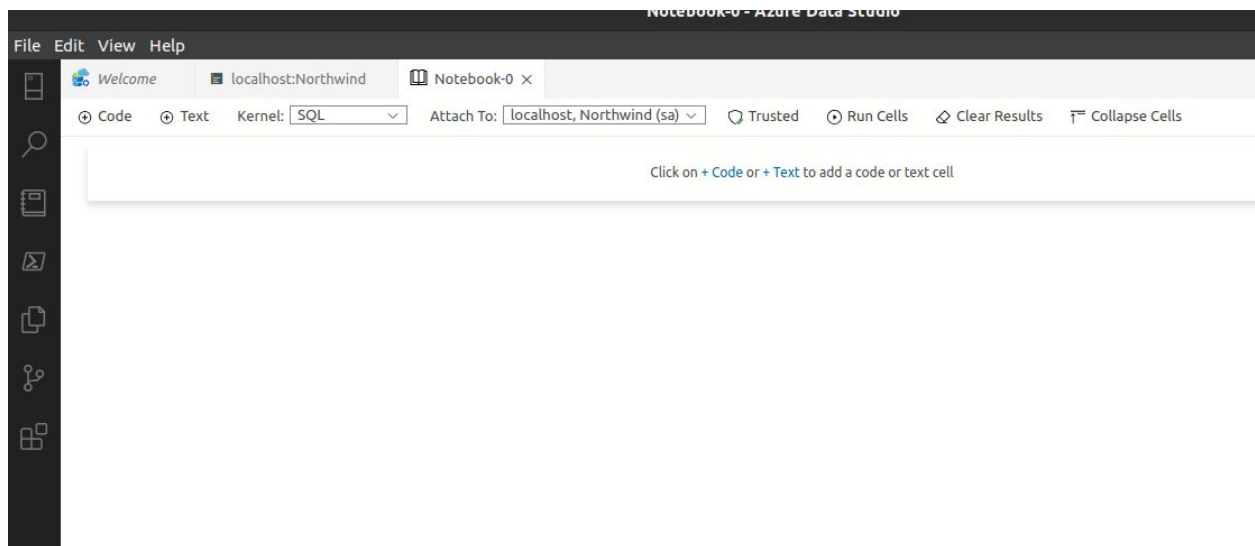

8.)Open file Northwind.sql using Azure data studio and run file to store table or data into Northwind database which is created by us.

9.)Now setup kernel SQL and setup Server setting .Now you are ready to execute command or query on database Northwind.

Click on new notebook

Now ready to run the query easily .

Azure data studio is also available on cloud. SignUp for free cloud service offered by azure and run the query.
